

Query: Translate triangle ABC in the direction of BC to get triangle A'B'C'. As the translation distance continuously increases, the change in the area of triangle A'CB is ().

Answer: Remain unchanged

Query: As shown in the figure, the thickness of the rectangular metal sheet is uniform, with side lengths $lab=10\text{cm}$ and $lbc=5\text{cm}$. sWhen C and D are connected to a circuit with a constant voltage U, the current is 2A. If A and B are connected to a circuit with the same constant voltage U, the current will be ().

Answer: 0.5 A

Query: The diagram shows a schematic of the reflex arc structure for the withdrawal reflex, with letters representing different structures. Analyze the diagram to identify the incorrect statement.

A. This reflex is completed through two neurons

B. Reflex activity must be based on a complete reflex arc

C. Transmission of excitation at point m can only be unidirectional

D. The structure indicated by E is a receptor of the reflex arc

Answer: A

Query: Chlorogenic acid, which has high medicinal value, can be extracted from honeysuckle (its structural formula is shown below). Which of the following statements is correct?

A. All carbon atoms in the molecule can lie in the same plane.

B. 1 mol of chlorogenic acid reacts with an excess of bromine water, consuming at most 2.5 mol Br_2 .

C. 1 mol of chlorogenic acid reacts with an excess of NaOH solution, consuming at most 4 mol NaOH.

D. The hydrolysis products of chlorogenic acid can all react with FeCl_3 solution to produce a color reaction.

Answer: C

(a)

(b)
